NEW DEVELOPMENTS IN CHEMICAL INDUSTRY

The Chinoi Plant has started the manufacture of chloroform, for the first time in Hungary. The plant employs over 1,000 workers. The Hungaria Sulfuric Acid Plant supplies the chloral necessary for the manufacture of chloroform. This plant has also developed a new type of sensitizer for use with colored film.

The manufacture of para-aminosalicylic acid, which has proved to be an outstanding drug for use against tuberculosis, is going ahead at full speed. The plant will shortly begin the manufacture of hexalgon, a new pain-relieving drug which has no aftereffects. Chemical Engineer Varga says that the plant will also be ready to produce pyramidon as soon as the Lampart Plant delivers the necessary enamel utensils.
